

COMPANY PROFILE · 2026

PINITHUB

SECURE · CONNECT · CONTROL

Give every important digital asset an identity, memory, protection and control.

COMPANY

A digital technology company for assets that matter.

PINITHUB is developed by TheCareerTech Pvt. Ltd. We build infrastructure so important digital work is not treated as a static file in a folder — but as an object with identity, history, protection and control.

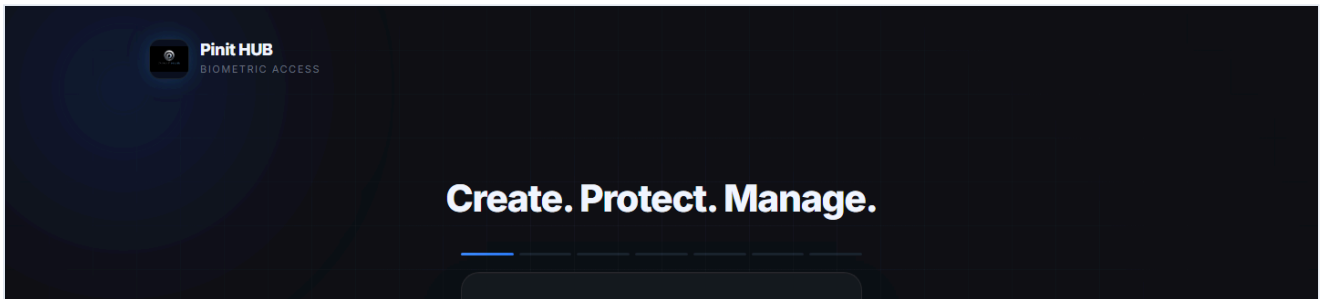

What we are

Digital Asset Intelligence & Protection — a control layer around the asset itself.

What we are not

Not another cloud drive. Not only a DAM, copyright scanner, or provenance add-on. Those solve parts of the problem. We connect them around the asset.

PINITHUB is the company. Pinit HUB, Pinit Exchange and Pinit Career are platforms under that company — not three separate firms.

PINIT HUB · LIVE PRODUCT SURFACE

WHERE WE ARE GOING

A world where important digital assets are never without identity, memory or control.

Digital creation is how people work, communicate and build value. The next generation of infrastructure should not only store what people create. It should understand it, remember it, protect it and connect it.

A persistent intelligence layer around digital assets — so owners can know where work came from, how it relates, what happens to it over time, and what control they retain.

This vision is about digital assets. Our other platforms sit beside it. They do not redefine this statement.

WHAT WE DO TODAY

Give people and organisations the intelligence and control they need to protect, understand and manage the digital assets that matter to them.

We bring together what is usually split across storage, asset management, monitoring, provenance, security and manual investigation — so an asset can move from creation to identity, protection, sharing, activity, discovery, evidence and control without losing its context.

**Principle**

A digital asset should have a memory. The asset should carry its context through a persistent intelligence layer — not by embedding a dossier in every copy.

Motto

Secure · Connect · Control. Never lose what matters — because identity, memory, evidence, protection and control can remain connected to it.

INDUSTRY SHIFT

Digital creation has scaled. Digital control has not.

Businesses operate through digital content. Teams, agencies and clients pass files across email, drives, websites and platforms. The systems around those files still answer one question: where is the file? Organisations need a different one: what is happening to the asset?

Visibility often stops after SHARE. That is the control gap.

Fragmentation Identity, ownership, activity and evidence live in different tools.	Ownership uncertainty The file exists. Proof of who owns it, which version is original, and what rights apply often does not.	Late evidence Screenshots and email searches after something goes wrong. Fragile and slow.
---	---	--

This is accelerated by AI-generated volume, platform fragmentation, distributed work and more complex rights. Storage protects a location. Modern work needs the asset’s lifecycle.

PLATFORMS

Three platforms. One company.

Clients should see PINITHUB as the company. Each platform has a distinct job.

Pinit HUB

Digital asset protection, identity, provenance, controlled sharing, tracking, monitoring and investigation.

CORE PLATFORM

Pinit Exchange

Marketplace for discovering, licensing, purchasing and delivering creative work linked to Hub-protected assets.

Pinit Career

A PINITHUB product for career development — introduced as part of the company family. Detail belongs in its own product conversation, not in the company vision for digital assets.

Hub is the centre of this company profile. Exchange and Career are named so the organisation is not mistaken for a single application.

HOW WE ENGINEER

Capabilities we actually run in product.

This is not a catalogue of every possible technology. It is what PINITHUB uses to deliver Hub today.

Identity & fingerprinting

Multi-layer Asset DNA, certificates, account identity including biometric sign-in on Hub.

Security & custody

Encrypted vault storage, access permissions, controlled share links, revocation.

APIs & software

Authenticated Hub APIs, organisation workspaces, Exchange bridge on asset identity.

AI & search

Semantic search, OCR and forensic comparison used inside Hub investigation and search — not a standalone GenAI product claim.

Data & evidence

Provenance events, share activity logs, investigation reports.

Cloud

Production Hub and Exchange deployed as live web applications with cloud database and file storage.

We do not list unpublished modules, untested pipelines, or laboratory features as company capabilities.

PRODUCT

Pinit HUB

Problem

Once a file is shared, owners often cannot answer who has it, which version is original, or what evidence they hold.

Solution

Enroll the asset: generate identity, store it under protection, share with rules, watch enrolled copies, investigate when a probe file appears.

Key capabilities

Protect and vault. Asset DNA and ownership certificates. Controlled sharing with activity and revoke. Monitoring of enrolled assets. Forensic investigation and reports. Business workspace for clients, campaigns, versions and handover.

Who it is for

Individuals, creators, agencies and organisations that need control over important files — not another drive.

Business value

Proof and accountability while work is still in motion — not only after a dispute.

**PRODUCT**

Pinit Exchange

Problem

Creative commerce is usually disconnected from protection. Listing a file should not mean giving up identity and custody.

Solution

A marketplace that lists Hub-protected creative work: discover, license, purchase and deliver — without turning Hub into a shop.

Key capabilities

Discover listings. Creator directory. License and order flows. Delivery of licensed work. Hub remains the home of vault and DNA.

Who it is for

Creators who choose to commercialise protected work, and buyers who want licensed creative assets.

Business value

Optional economic layer. Protecting an asset in Hub does not list it for sale.

EXCHANGE IS A PINITHUB PLATFORM. HUB TECHNICAL SCREENS ARE NOT SHOWN HERE ON PURPOSE.

PRODUCT INTRODUCTION

Pinit Career

Pinit Career is a PINITHUB product for career development. It sits in the company family so clients see the full organisation. It is not the subject of our vision or mission for digital assets, and it is not described here as a finished operating system.

In brief

A career-oriented platform under PINITHUB, aimed at learners and institutions. Capabilities are presented only when they are live in product — not as a catalogue of planned modules.

For digital-asset buyers, Hub and Exchange are the relevant platforms. Career is introduced so PINITHUB is not reduced to a single app.

WHERE THIS APPLIES

Sectors that live on digital work.

Creative & media

Campaigns, images, video and brand assets that move across agencies and clients.

Agencies & professional services

Client workspaces, versions, approvals and handover of deliverables.

Enterprise & product teams

Sensitive documents, design systems and packages that must remain accountable after share.

Education & institutions

Where Career is relevant as a PINITHUB product introduction — not as a claim that every campus workflow is live in this profile.

Publishers & platforms

Content that is published, copied and reused across the open web after it leaves the owner.

Finance & regulated teams

Where proof of access, sharing and origin of files is an operational requirement — using Hub's existing protect, share and investigate capabilities.

ENGAGEMENT

Discovery → Design → Build → Deploy → Support

How we engage organisations that adopt PINITHUB platforms.

1 • Discovery

Understand which assets matter, who shares them, and where control is lost today.

2 • Design

Map Hub (and Exchange if commerce is in scope) to the real workflow — not a generic install.

3 • Build

Configure workspaces, roles, protection and sharing to match how the team already works.

4 • Deploy

Go live on production Hub. Train owners. Keep private assets private.

5 • Support

Ongoing product support, investigation when needed, and partnership as usage grows.

DIFFERENTIATION

The asset is the centre of the system.

Not “where is the file?”

Hub is built to answer what happened to the asset — for work you enroll.

Evidence in the lifecycle

Identity, certificates, share activity and investigation exist as product — not a slide.

Share as control

Links with rules, activity and revoke. Sharing does not have to mean losing the trail.

Discover is not proof

Monitoring and investigation distinguish a possible match from a verified relationship.

Private first

Protect without listing. Exchange is a choice, not a requirement.

Ship what we claim

This profile describes live Hub capability. We do not present unfinished work as complete.

COMPANY

TheCareerTech Pvt. Ltd.

PINITHUB is built in Bangalore, India. Leadership names and biographies are provided in a live conversation or a current one-pager — this profile does not invent a leadership roster.

Legal entity

TheCareerTech Pvt. Ltd.
Bangalore, India

Brand

PINITHUB — company and platform brand.
Pinit HUB — digital asset platform.
Pinit Exchange — marketplace platform.
Pinit Career — career product (introduction).

**DIRECTION · NOT A FEATURE LIST**

Stay with the asset as the world keeps copying it.

We will keep extending identity, memory and control across more of the asset journey — as far as is technically and legitimately possible. We will not print a backlog of unreleased modules in this profile.

Long-term: infrastructure so important digital assets are never without identity, memory or control.

Anything not in Hub today is omitted from product pages on purpose. This page is direction only.

Let's talk.

Partnerships, demos and organisational rollout start with Hub — protect, prove, share, detect, investigate.
