

COMPANY & PLATFORM PROFILE · 2026

PINITHUB

SECURE · CONNECT · CONTROL

Digital technology company. Three platforms. One idea: important work should carry identity, evidence and control.

DIGITAL CREATION SCALED. CONTROL DID NOT.

Assets move. Context does not.

Files travel across people, platforms and organisations. Identity, ownership, protection and activity stay behind — if they exist at all.

Control often stops after SHARE. That is the gap PINITHUB is built around.

Fragmented systems

Storage, identity, rights, monitoring and evidence live in different tools.

Ownership is hard to prove

Copies and edits separate work from its original evidence.

Careers are equally fragmented

Learn, project, internship and hire are treated as unrelated PDFs.

Two questions. One company. Hub asks: what happened to the asset? Career asks: can this person prove the journey from skill to hire?

WHAT IS PINITHUB

A digital technology company — not a single app.

PINITHUB is the company and platform brand. Products may evolve. The mission stays: give important digital work — and the people who create it — identity, evidence and control.

VISION

A world where important digital assets — and career journeys — are never without identity, memory or control.

MISSION

Bring together capabilities that are now split across storage, monitoring, provenance, classrooms, internships and hiring — into connected platforms.

IDENTITY

Persistent identity for assets and verified career progress.

PROTECTION

Secure custody, permissions and evidence of origin.

CONTROL

Share, license, revoke, monitor — and progress only when proven.

INTELLIGENCE

Activity, similarity, risk, and career evidence — not empty claims.

MOTTO

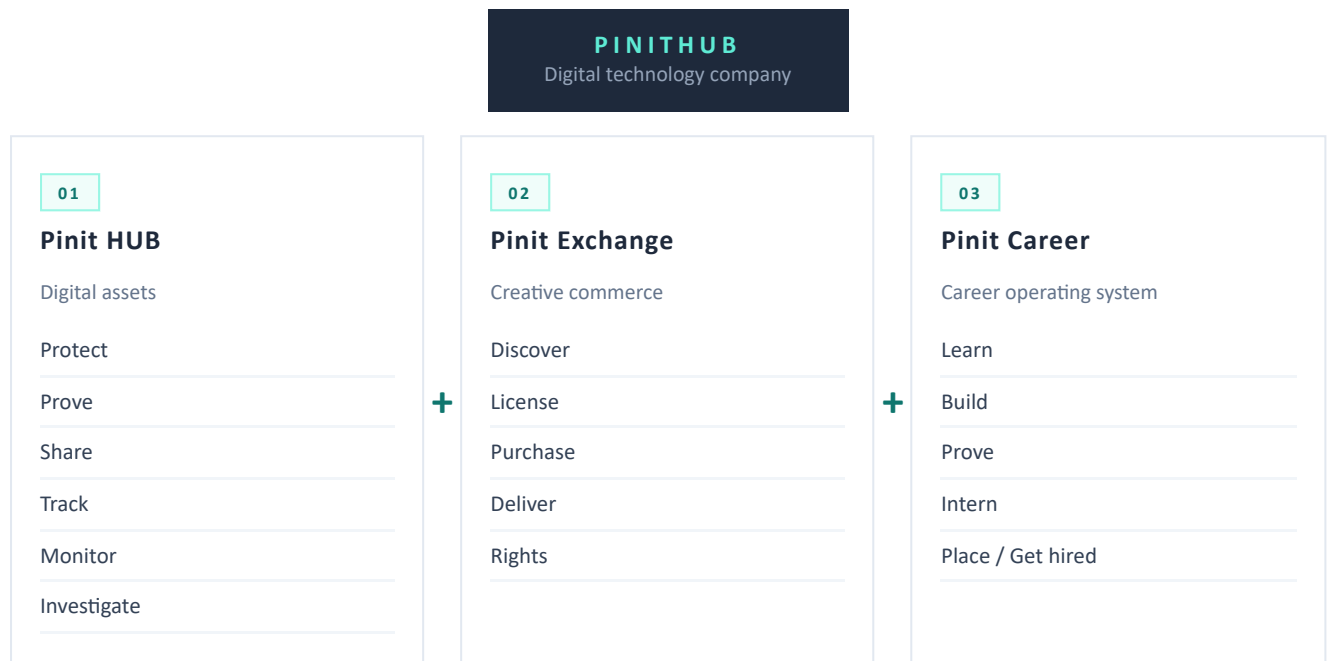

Secure · Connect · Control

THREE PLATFORMS

PINITHUB is an ecosystem.

One company. Three products. Clients should not confuse Hub with the whole organisation.

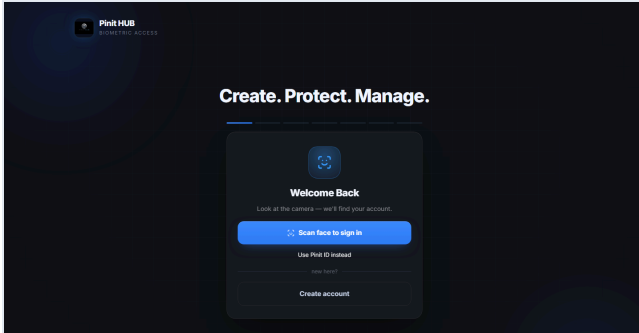

Not three company profiles. One company profile. Deeper product books can sit beside this for specialists.

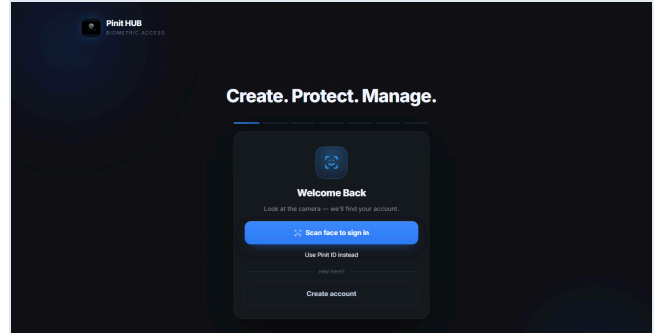

PLATFORM ONE

Digital asset intelligence & protection

Hub is the live control layer for enrolled assets: identity, custody, sharing, monitoring and investigation.

REAL PRODUCT · HUB SIGN-IN

REAL PRODUCT · HUB WORKSPACE (PRODUCTION)

Protect & prove

Encrypted vault, Asset DNA, ownership certificates.

Share without losing control

Timed links, permissions, revoke, access activity.

Detect & investigate

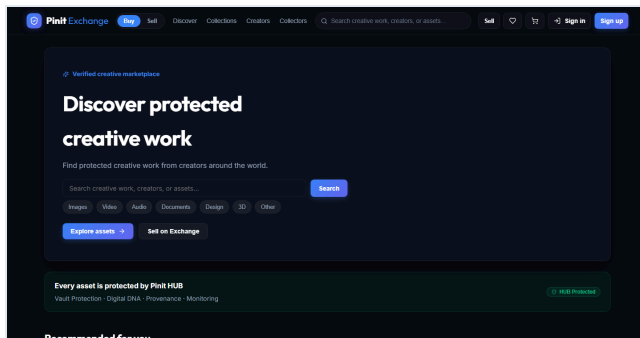

Monitoring of enrolled assets.
Compare. Evidence packs.
Discover is not proof.

PLATFORM TWO

Creative marketplace on Hub-protected work

Discover, license, purchase and deliver creative assets. Commerce is optional. Protecting an asset in Hub does not list it for sale.

Recommended for you

REAL PRODUCT · EXCHANGE

REAL PRODUCT · DISCOVER

Creators

List Hub-protected work. Earnings and licenses live here — not in Hub storage.

Buyers

Browse, license, receive delivery.
Rights stay with the sealed license.

Trust boundary

Hub owns identity and vault.
Exchange owns listings, cart, orders.

PLATFORM THREE · CAREER OPERATING SYSTEM

From skill to hire — one evidence-backed record

Built for the next generation: certified learning is often too expensive, then still disconnected from internships and jobs. Career is not an LMS, not a job board, and not a Hub portfolio builder.

Four domains

Training → Projects → Internships → Placement

Learn → Practice → Build → Prove → Intern → Prepare →
Apply → Get hired

AI teaching path

AI teaching sessions. Assessment after teaching. Pass required to continue. Certificate on successful completion. Opportunities posted on the platform. Designed to help candidates get hired — not a job guarantee.

Student

Verified skills, projects, internships, applications — one career evidence profile.

College

Competency view, internship verification, drives, shortlists, placement reporting.

Recruiter

Higher-signal evaluation: trust score, code/STAR evidence, pipeline — not resume spam.

Career screens appear as they are production-ready. Until then this page is the product story, not a mock UI of unbuilt modules.

COMPANY-LEVEL RELATIONSHIP

Same organisation. Different objects.

Do not invent a technical merge that is not the product. The connection is the company idea: evidence instead of “trust me.”

HUB

Protects and proves **digital assets**.

EXCHANGE

Lets those assets be **discovered and licensed** when the owner chooses.

CAREER

Verifies the **person's** path from learning to employment.

Where they already meet

- One Pinit identity across Hub and Exchange
- Listings reference Hub-protected asset identity
- Licensed delivery without giving away the vault master

Keep distinct

- Hub certificate = asset ownership evidence
- Career certificate = course / competency completion
- Hub portfolio ≠ Career OS

AUDIENCES

One company. Four kinds of customer.

Individuals

Protect important files. Prove origin. Share with control.

Creators

Protect work, then license it on Exchange when they choose.

Businesses & agencies

Clients, campaigns, versions, approvals, handover, rights view.

Institutions & young learners

Career OS: training, projects, internships, placement workflows.

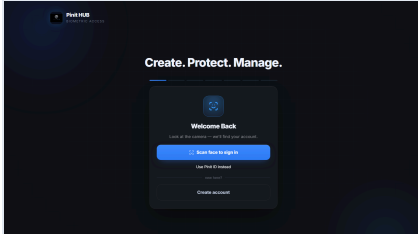

Hub is private-first. Exchange is optional commerce. Career is education-to-employment. Nothing requires listing an asset for sale.

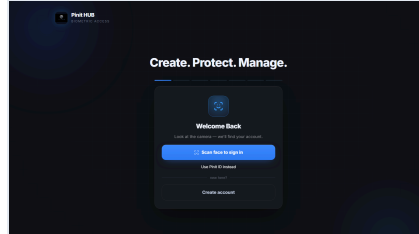

REAL SURFACES

What the platforms look like

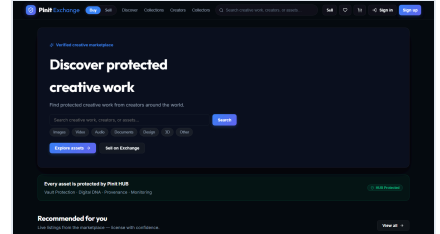

Screens below are captured from live or local product. Missing tiles are not invented.

HUB

HUB · LIVE

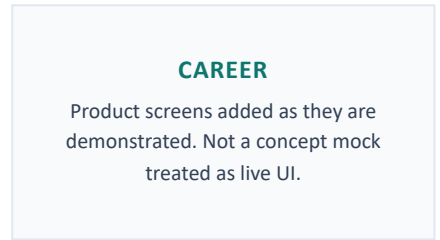

EXCHANGE

EXCHANGE · DISCOVER

EXCHANGE · CREATORS

CAREER

Product screens added as they are demonstrated. Not a concept mock treated as live UI.

HIGH LEVEL · NOT AN ARCHITECTURE DUMP

Mechanisms under the products

Digital identity

Asset DNA and Pinit account identity. Career progress as a verified record.

Provenance

Origin, versions, share activity, licenses — history that can be shown.

Protection

Encrypted custody, controlled links, gated learning (pass to continue).

Verification

Certificates, forensic compare, course assessment, internship verification desk.

Monitoring

Enrolled assets and configured surfaces — not unrestricted internet surveillance.

Intelligence

Search, similarity, access intelligence, career evidence scoring. Outcomes stay honest.

We do not lead with layer counts, hashes, or internal service names. Clients buy control and evidence — not a forensic lab brochure.

TRUTH MODEL

Place the company in market — without false claims.

Some capability is live. Some is in completion and testing. Some is the destination. All three belong in this profile; they are labeled.

TODAY

Hub: Protect, vault, DNA identity, certificates, controlled share, tracking, monitoring of enrolled assets, investigation, business clients/campaigns/versions/handover.

Exchange: Marketplace surfaces for discover, listings, licenses, creator directory — Hub-linked identity.

Career: Positioned as Career OS for young learners: AI teach → assess → pass → certify → opportunities. Four-domain OS is the product category we occupy.

BUILDING

Exchange commerce hardening and consistent public status. Hub asset identity as one user-facing object. Career teaching, assessment, certification and opportunity flows completing toward production. Internship and placement desks. Evidence Vault. Interview / STAR preparation.

NEXT

Deeper asset relationship intelligence. Broader authorized-surface monitoring. Career college heatmaps, Contradiction Sentinel, recruiter pipelines. Tighter optional links between verified work and Hub-protected assets — only where real.

We do not claim measured increases in placement rates. Career is designed to streamline the path to hire and to connect learners with posted opportunities.

WHERE WE ARE GOING

Infrastructure for identity, evidence and control — for assets and for careers.

PINITHUB's long view: important digital assets never without identity, memory or control — and learners never left with a course certificate that cannot travel into work.

Never lose what matters

Because identity, memory, relationships, evidence and control can stay connected to the work.

Never hire on a claim alone

Because learning, projects, internships and interviews can sit on one career record.

Secure · Connect · Control

Hub protects assets. Exchange moves them when you choose. Career verifies the journey from skill to hire.
